

Actividad #1 Reporte: Burp Suite: configuración, instalación de certificado y Foxyproxy.

1.- En el navegador de nuestra preferencia, buscaremos burp suite para su descarga.

1.1.- Una vez dentro de la página de Portswigger seleccionaremos la versión con la que trabajaremos, en mi caso “Community Edition”. <https://portswigger.net/burp>

1.2 .- Se descarga e instala.

The screenshot shows the PortSwigger website's download page for version 2023.9.3. The page includes a navigation bar with links to Products, Solutions, Research, Academy, and Support. The main heading is "Professional / Community 2023.9.3" with a "Stable" badge. Below this, it shows the release date "25 August 2023 at 09:43 UTC". There are two dropdown menus: "Burp Suite Community Edition" and "Windows (64-bit)". A prominent orange "DOWNLOAD" button is visible, along with a link to "show checksums". A brief description states: "This release upgrades Burp's built-in browser and fixes a bug when scanning GraphQL APIs." Below this is a section titled "Browser upgrade" with more details about the browser update to version 116.0.5845.110 for Mac and Linux, and 116.0.5845.110/111 for Windows.

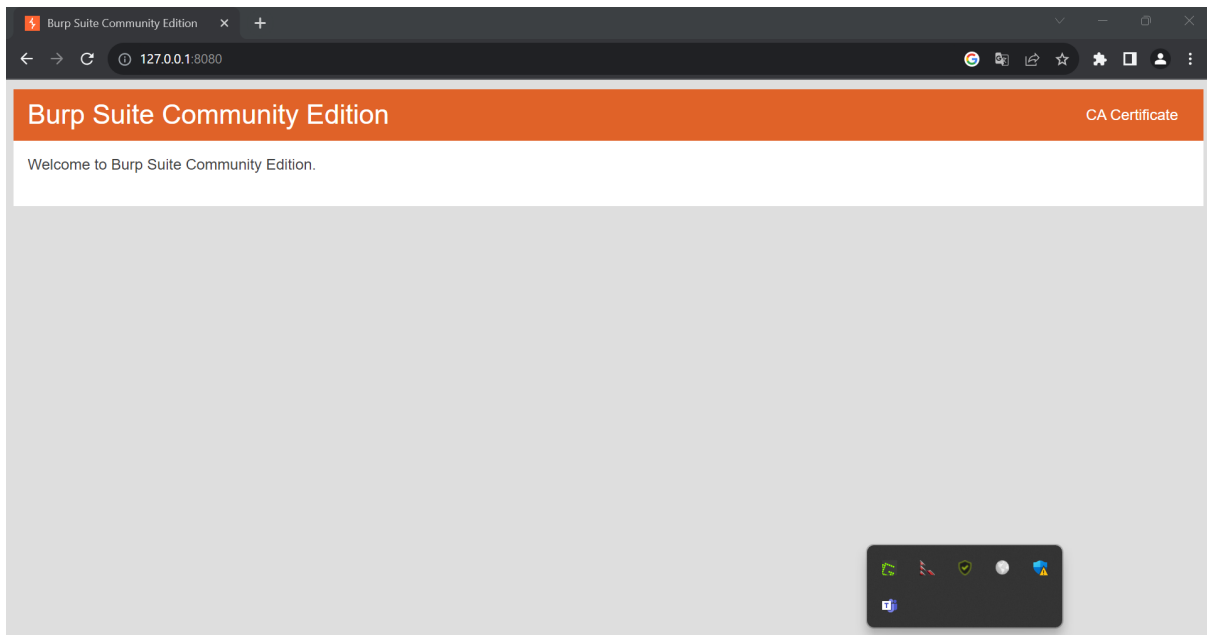

2.- Una vez instalado nos dirigimos a la parte de configuración, y buscaremos “Proxy”, para poder revisar el localhost que viene por defecto así como su puerto.

The screenshot shows the Burp Suite Settings window with the "Proxy" tab selected. The left sidebar contains a "Tools" section with "Proxy" highlighted. The main area is titled "Proxy listeners" and contains a table with one listener configured. Below the table, there are buttons for "Import / export CA certificate" and "Regenerate CA certificate". The "Request interception rules" section is also visible, showing a list of rules with checkboxes for "Enabled", "Operator", "Match type", "Relationship", and "Condition".

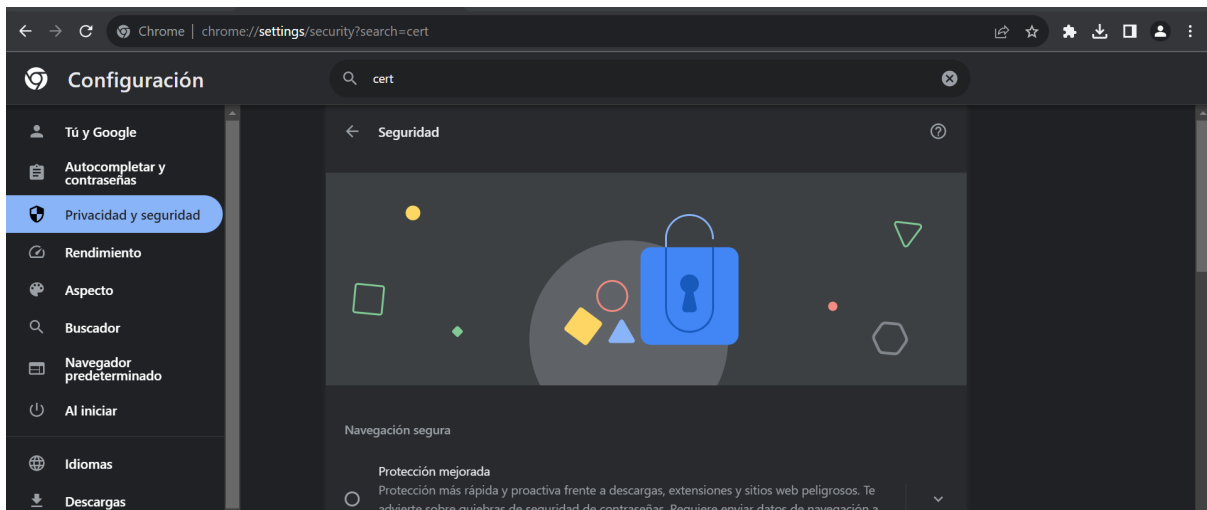

Running	Interface	Invisible	Redirect	Certificate	TLS Protocols
<input checked="" type="checkbox"/>	127.0.0.1:8080			Per-host	Default

Enabled	Operator	Match type	Relationship	Condition
<input checked="" type="checkbox"/>		File extension	Does not match	(^gif\$ ^jpg\$ ^png\$ ^css\$ ^js\$ ^ico\$ ^
<input type="checkbox"/>	Or	Request	Contains parameters	
<input type="checkbox"/>	Or	HTTP method	Does not match	(get post)
<input type="checkbox"/>	And	URL	Is in target scope	

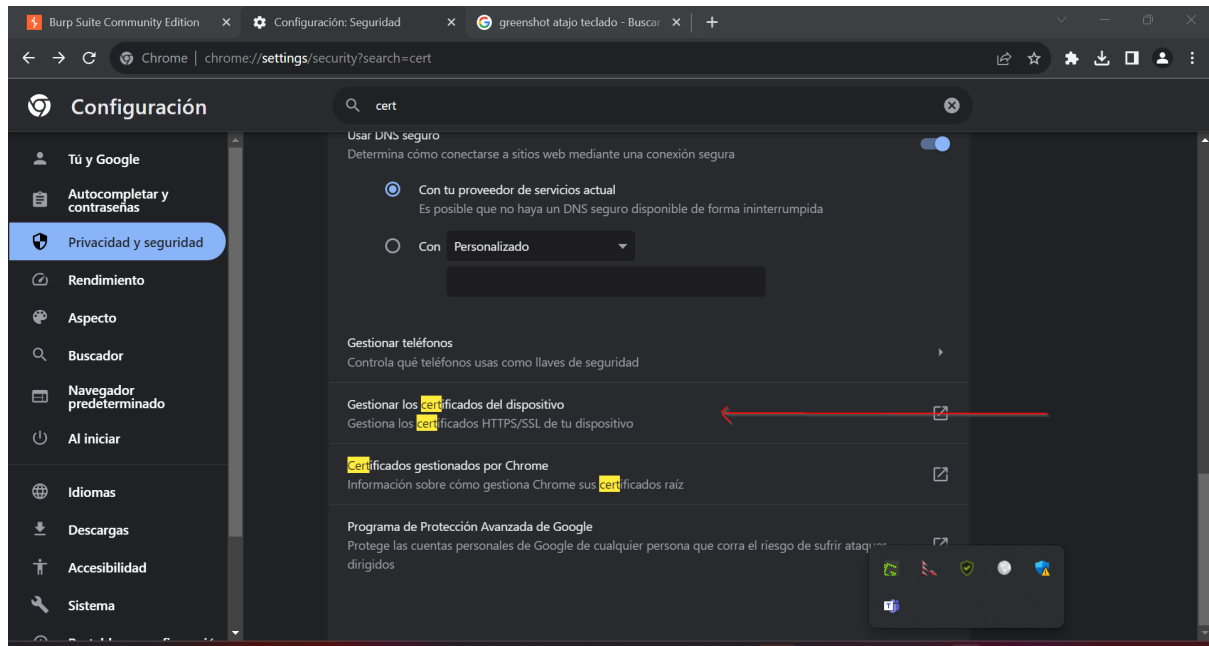

3.- En el navegador de nuestra preferencia, en mi caso Chrome, buscaremos la siguiente dirección 127.0.0.1:8080, de la cual descargaremos el CA Certificate, el cual se encuentra en la parte superior derecha.

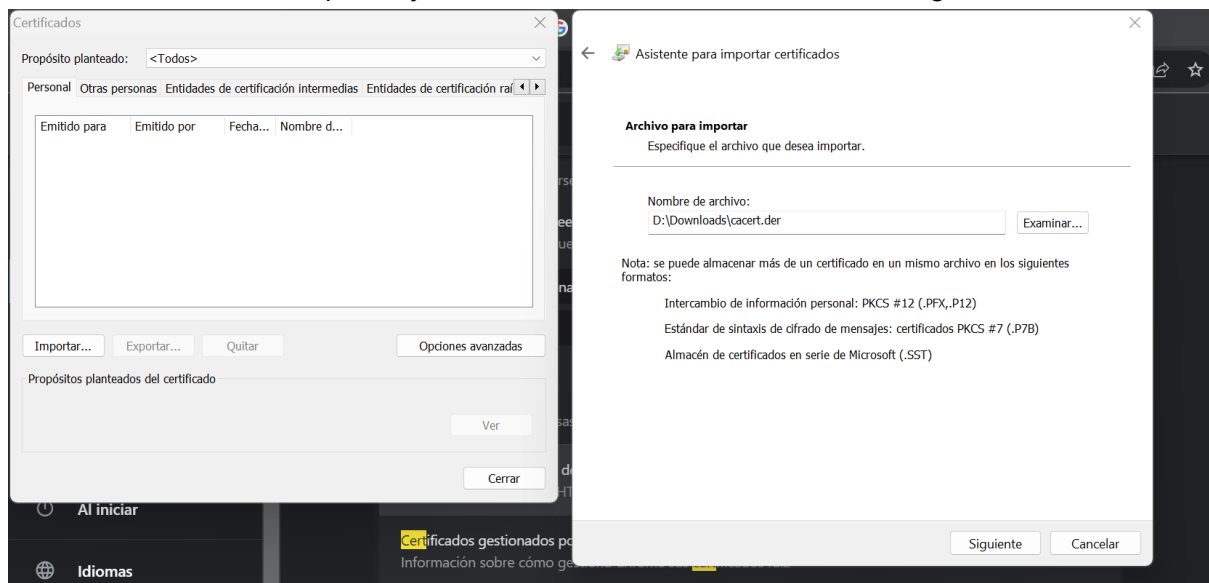

4.- Para la configuración del certificado, iremos a la configuración del navegador y buscaremos la palabra cert.

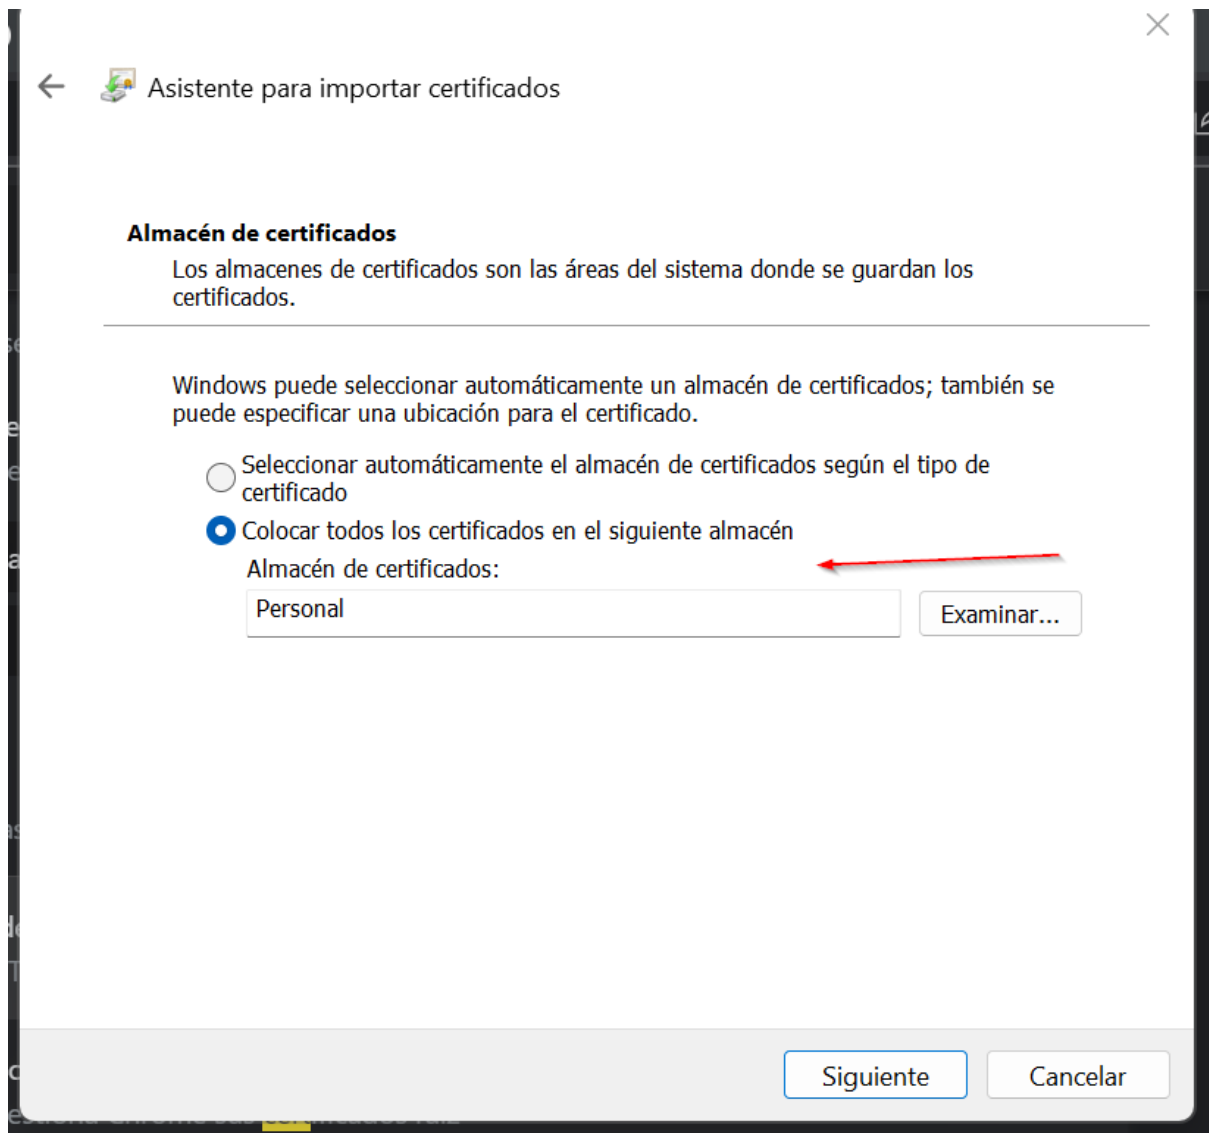

4.1 .- Nos dirigimos a la parte de “Gestionar los certificados del dispositivo”

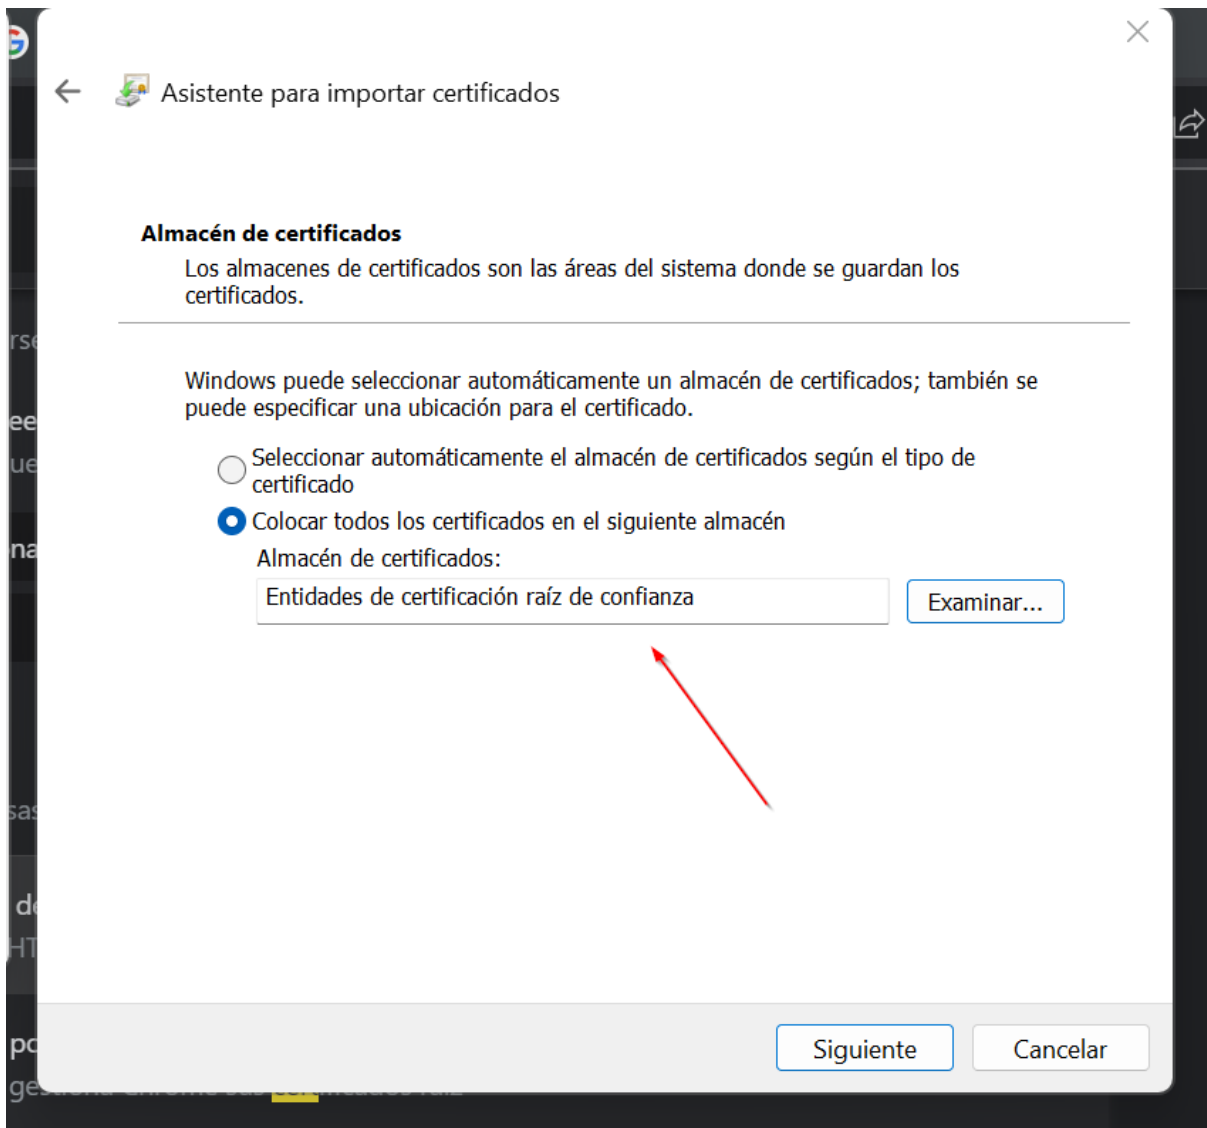

4.2.- Procederemos a importar y seleccionar el certificado antes descargado.

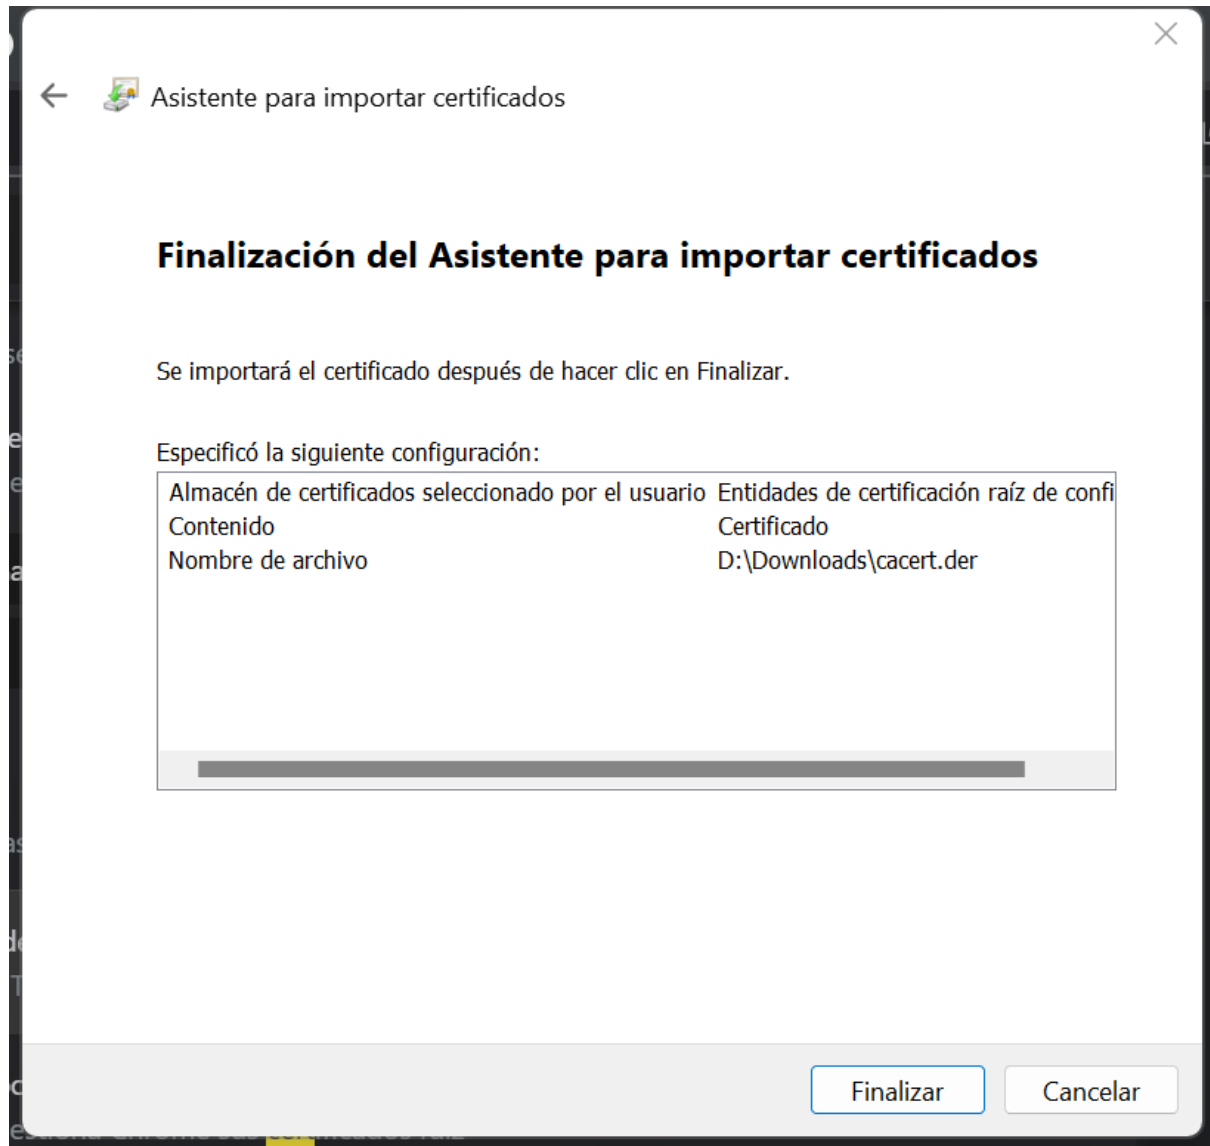

4.3 .- Colocaremos estas opciones.

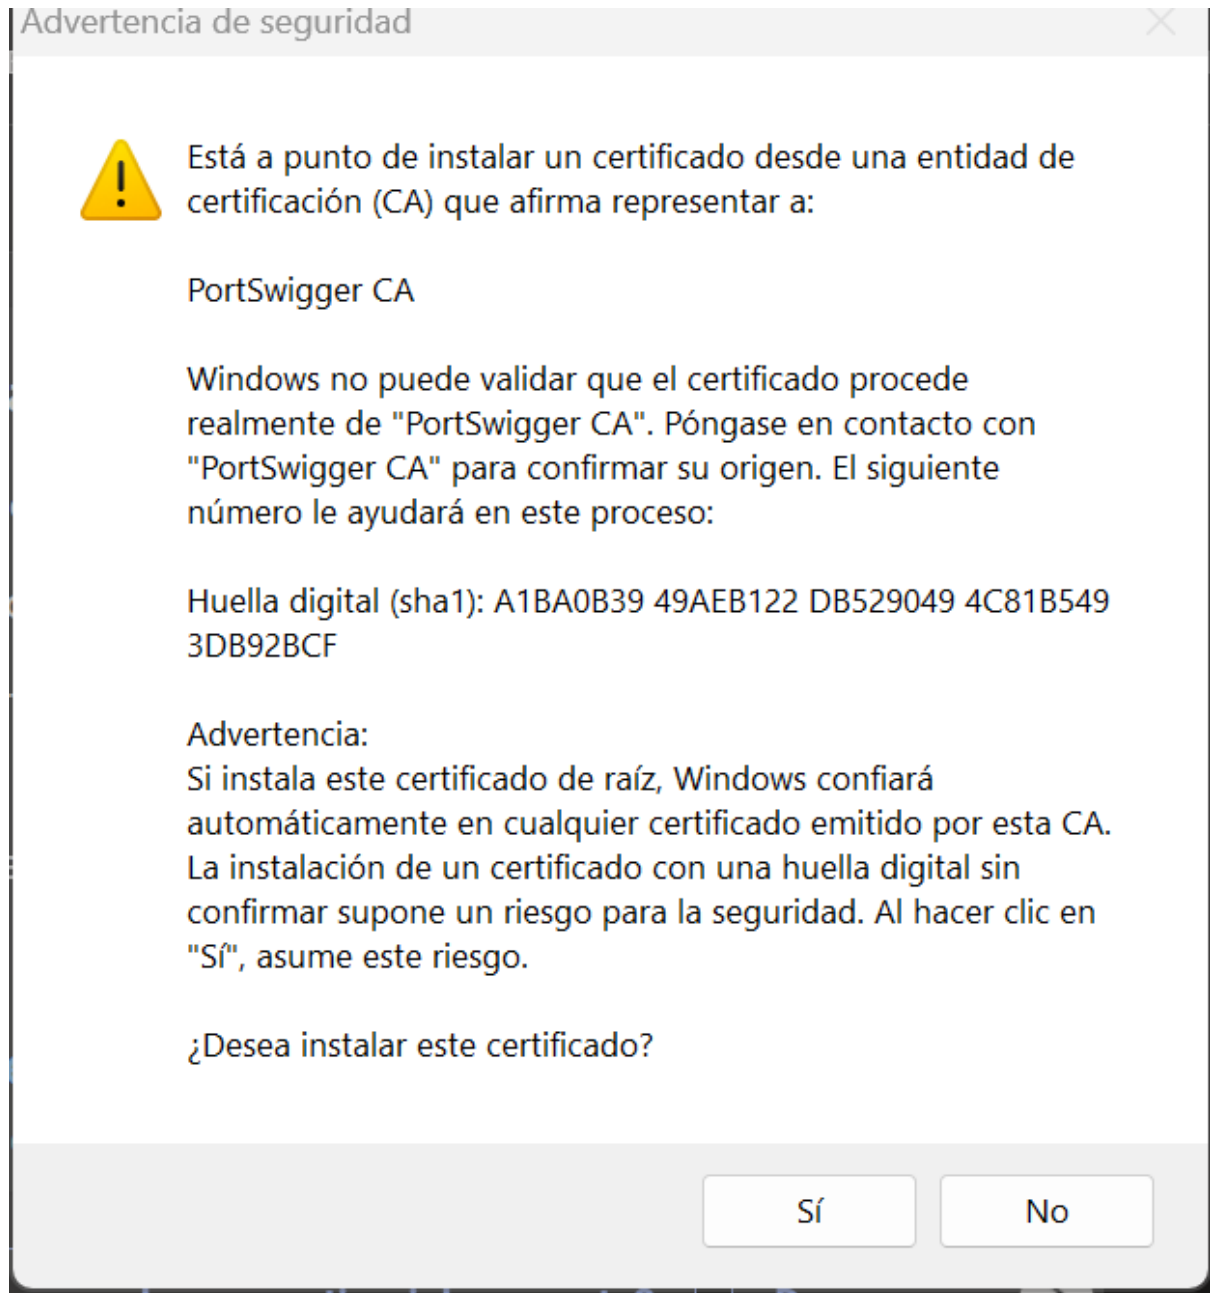

4.4 .- Finalizamos la importación.

4.5 .-Seleccionamos la opción de "Sí"

5.- Buscaremos y agregaremos la extensión de FoxyProxy

The image shows two screenshots from a Chrome browser. The top screenshot is the Chrome Web Store page for 'FoxyProxy Standard'. It features the extension's logo, a 4.5-star rating from 732 reviews, and over 300,000 users. A yellow warning banner at the top states: 'No puedes añadir extensiones en las ventanas abiertas en el modo Incógnito o como invitado'. The bottom screenshot shows the 'FoxyProxy options' page. It has a sidebar with the FoxyProxy logo and navigation links: Proxies, Global Settings, Import/Export, QuickAdd, and About. The main content area shows the 'Proxies' tab with a table of proxy settings. The 'Proxy mode' dropdown is set to 'Disable FoxyProxy'. The table has columns for Enabled, Color, Proxy Name, Proxy Notes, Host or IP Address, Port, SOCKS proxy?, SOCKS Version, and Auto PAC URL. A single proxy is listed with a green checkmark, a blue square, the name 'Default', and a note: 'These are the settings that are used when no patterns match an URL'. To the right of the table are buttons for 'Move Up', 'Move Down', 'Add New Proxy', 'Edit Selection', 'Copy Selection', and 'Delete Selection'. At the bottom of the options page are links to 'Please Donate' and 'Buy Proxy Service'.

6.- Agregaremos un nuevo proxy y lo configuraremos. Usando la ip 127.0.0.1 y el puerto 8080

7.- Activares el proxy que acabamos de configurar, como se muestra en la imagen.
